```
This nuclectide sequence encodes the rat (Na,K)-ATPase alpha 1 subunit (see AAW88390). (Na,K)-ATPase is an ion transporter essential to the cell. The invention provides new, mutated (Na,K)-ATPases (see AAW88287-89) that can be used as novel selectable markers. Appropriate mutation of the (Na,K)-ATPase (see AAW88287-89) that can be used as novel gene (see AAW84294-96) causes a loss in sensitivity of the encoded enzyme to ouabain. A claimed method for detecting transfection or transfecting the cell with a vector carrying a mucleic acid encoding a mutated (Na,K)-ATPase gene of the invention, plus a gene of interest; (b) incubating the cells with a cardioglycoside such as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; (c) contacting the incubated cells with a fibringen-coated solid matrix; and (d) detecting any cells bound to the matrix. The new selectable markers are particularly useful where antibiotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 3633;

The nucleic acid is useful as a selective marker to screen for transformed cells in gene therapy. Unlike prior art selective markers, the gene is already expressed in all mammalian cells and the minor mutation is more natural than adding an artificial gene or making major mutations so the invention is more sultable for selecting cells for transplantation into a patient. The present sequence encodes wild-type rat (Na,K)-ATPase protein used as the basis for the mutated proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding an ouabain-resistant (Na,K)-ATPase for use as a selectable marker for transformed mammalian cells, particularly suitable when selecting cells for transplant into a patient -

                                                                                                                                                                                                                                                                                                                                                                                                     ruration, Arained by mutageness of the (Na,K)-AIPse gene (see AAV84297), causes a loss in sensitivity of the encoded enzyme to cushain. A claimed method for detecting transfection or transformation of a sukary-discall congrises: (a) transformation of a sukary-discall congrises: (a) transformation of a sukary-discall congrises: (a) transformation of the cell with a vertor carrying a nucleic acid encoding a mutated (Na,K)-AIPse gene of the invention, plus a gene of interest, in) incubating the cells with a cardically-coside such as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; (c) contaging the incubated cells with a fittingen-costed solid matrix; and (d) detecting any cells bound to the matrix. The new selectable marker is particularly useful where antibiotic resistance selection is undesirable, e.g. in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This nuclearide sequence encodes a new mutated (Na,K)-Ampase alpha subunit (see AAW8825), in which the Leu-879 residue of the native rat projein (see AAW8425), has been mutated to systeine. This mutated projein can be used as a novel selectable marker. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic.

The new selectable marker is particularly useful where antibiotic resistance selection is undesirable, e.g. in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                           This nucleonide sequence encodes a new mutated (Na,K)-ATPase alpha 1 subunit (see AAW88299) in which the Leu-881 residue of the native rat protein (see AAW88299) has been mutated to cysteine. This mutated protein can be used as a novel selectable marker. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid encoding an ouabain-resistant (Na,K)-ATPase termed 799/801NKA, a vector comprising the nucleic acid and a veri comprising the vector. The nucleic acid is useful as a selective marker to screen for transformed cells in gene therapy. Unlike
                                                                                                                        New nucleic acid encoding an ouabain-resistant (Na,K)-ATPase for use a selectable marker for transformed mammalian cells, particularly suitable when selecting cells for transplant into a patient \, -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                suitable for selecting cells for transplantation into a patient. The present sequence encodes a mutated rat (Na,K)-ATPase protein where Leu at position 873 has been replaced with Gys. The specification speculates that the Cys residue may form a new disulphide bond which confers the ouabain resistance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid encoding an ouabain-resistant (Na,K) ATPase termed 799/80.NKA, a vector comprising the nucleic acid and a cell comprising the vector. The nucleic acid is useful as a selective marker to screen for transformed cells in gene therapy. Unlike prior art selective markers, the gene is already expressed in all mammalian cells and the minor mutation is more natural than adding an artificial gene or making major mutations so the invention is more suitable for selecting cells for transplantation into a patient. The present sequence encodes a mutated rat (Na,K)-ATPase protein where Leu at position 881 has been replaced with Cys. The specification speculates that the Cys residue may form a new disulphide bond which confers the ouabain resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding an ouabain-resistant (Ma,K)-ATPase for use as a selectable marker for transformed mammalian cells, particularly suitable when selecting cells for transplant into a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Column 40-44; 30pp; English.

transformation of a eukaryotic cell comprises: (a) transforming or transfecting the cell with a vector carrying a nucleic and encoding a mutated (Na,K). ATPase gene of the invention, plus a gene of interest; (b) incubating the cells with a cardingly-neide such as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; (c) contacting the incubated cells with a fibring-n-coated solid matrix; and (d) detecting any cells bound to the matrix. The new
                                                                                                                                                                                                  This nuclectide sequence encodes a new mutated (Na,K) ATPase alpha I subunit (see AAW88288), in which the Leu-879 and Leu-881 residues the native rat protein (see AAW88290) have been mutated to cysteine. This mutated protein can be used as a novel selectable marker. The mutation, obtained by mutagenesis of the (Na,K) ATPase gene (see AAV84297), causes a loss in sensitivity of the encoded enzyme to causain. A claimed method for detecting transfertion or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Belusa R;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pattus rattus.
Synthetic.
                               selectable marker is particularly useful where antihictic resistance selection is undesirable, e.g. in gene therapy.
                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 54-58; 72pp; English.

mat
                                  prior art selective markers, the gene is already expressed in all mammalian cells and the minor mutation is more natural than adding artificial gene or making major mutations so the invention is more suitable for selecting cells for transplantation into a patient. The present sequence encodes a mutated rat (Na,K)-ATPase protein where Leu at position 879 and 881 has been replaced with Tys The specification speculates that the Cys residue may form a new disulp
                                                                                                                               The invention relates to a nucleic acid encoding an ouabain-resistant (Na,K)-ATBASE termed 799/801NFA, a vector comprising the nucleic acid and a cell comprising the vector. The nucleic acid is useful as selective marker to screen for transformed cells in gene therapy Unl
                                                                                                                                                                                                                         New nucleic acid encoding an ouabain-resistant (Na,K)-ATPase for use as a selectable marker for transformed mammalian cells, particularly suitable when selecting cells for transplant into a patient -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B
AAH57161 to AAH57576 represent cell and tissue specific polynucleotide sequences (1). (1) can have cytostatic, immunomodularrory and neuroprotective activities, and can be used in gene therapy. (1) and proteins (11) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetros, poptides, proteins, aganists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (1) in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (1) and (11) are used to produce an expression profile that defines a morabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis,
                                                                                                                                                                                                                                                                       New cell and tissue specific polynucleotides useful for diagnosis, progness or monitoring of treatments for disorders where the gene is associated with a cancer, immunopathology or neuropathology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; tissue specific; diagnosis; brain; heart, skeletal muscle; lung; liver; uterus; ovary; stomach, intestine; kidney; panoreas; ss; metabelic disease; developmental disease; or static, immunosuduatory neuroprotective; gene therapy; cancer; immunopathology; neuropathology

mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of [1] in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. [1] and [1] are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene is associated with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAH57161 to AAH57576 represent cell and tissue specific polynucleotide sequences (I). (I) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening

CC AIDS, autcimule diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzhelmer's disease, CC parkinson's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC disorders, and infections. The proteins can also be used to aid wound CC sunburn, to mainrain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. CC Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human CC servered novelopenceding CDM of the invention can be used in the disorders mentioned above, and continuous combent assay (ELISA). The present sequence represents a human continuous combents assay (ELISA). The present sequence represents a human continuous combents assay (ELISA). The present sequence represents a human continuous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 25 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoletic disorders, diseases of the immune system,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AADD17571-AADD17645 represent cDNAs corresponding to 25 human secreted protein genes, and AAED3152-AAED3126 represent the proteins they encode. AAED3127-AAED3150 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 427-428; 546pp; English.

(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule (I) comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 4191-4192; 11750pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2001-662795/76.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642 AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to polynucleatides (AAKS1416 AAKS1435) and the encoded polypeptides (AAW78323 AAM8302) that exhibit activity elating to cycokine, call proliferation or call differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibits activity and may be useful in the diagnosis and/or activity inhibits activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammation.
Note. Records for SEQ ID NO 2110 (AAK1218), 2111 'AAK12192) and 2666 (AAK80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.
